

# BLACKJACK

THE NEXT GENERATION IN  
STATE-OF-THE-ART GAMING

Blackjack, also known as 21, is the most widely played casino banking game on the market today. Diamond Blackjack delivers a classic table game experience with an extra "hit" of high-tech excitement, giving casinos, racinos, and gaming lounges a modern, new way to hit the jackpot without going bust.

# DIAMOND BLACKJACK AND MULTI-HAND BLACKJACK

Interblock Diamond Blackjack is typically driven by an automated, electromechanical “dealer” using real cards to simulate a live game without any assistance from a croupier. A video version using randomly selected virtual cards is also available, as well as a semi-automated “Dealer Assist” version (multi-hand only) where a croupier deals the cards.

Interblock also offers the industry's only multi-hand Blackjack game, a proprietary system that allows an unlimited number of players to simultaneously play up to three hands of blackjack in a heads-up format against the dealer. As a “community” game, the starting two cards for all three hands are the same for all players, but afterwards the players make their own decisions. Standard blackjack rules apply.

## MULTI-HAND BLACKJACK

- Available for unlimited players
- Settable minimum/maximum limits
- Settable time limits for player decisions

## CLASSIC BLACKJACK

- Standard for up to seven players
- Settable minimum/maximum limits
- Settable time limits for players decisions
- Lucky Aces side bets for single hand
- Several variations of rules are available to choose from

## THREE WAYS TO PLAY

Different jurisdictions often have different regulations regarding the types of gaming operations allowed. Diamond Blackjack and Multi-Hand Blackjack offers various modes of operation so you can comply with local standards:

- **Automated** — Automation has long been a driving force behind Interblock gaming devices. Fully automated, full-featured versions of the Diamond Blackjack games fit neatly in any casino or gaming hall, and are especially useful in venues where live, dealer-operated table games are not allowed.
- **Video** — A software generator drives the video versions of Diamond Blackjack and multi-hand Blackjack, with computer-generated animation shown on an LCD display. No human assistance is required for simulating the traditional table game.
- **Dealer Assist (Multi-hand Blackjack only)** — Diamond Dealer Assist Multi-hand Blackjack lets players place wagers through individual Play Stations, while the cards are dealt by an electronic card-dealing shoe operated by a croupier:
  - Uses pre-shuffled cards
  - Eight decks
  - Each card is drawn separately by the croupier
  - The mechanism provides reliable delivery and reading of each card for the croupier
  - The card reader records each card drawn and the real-time status of the hand in play

## SIDE BETS ELEVATE PLAYER ACTION AND CASINO RETURNS

### LUCKY ACES

- Easy to play and understand
- Four pay tables (Hold: 8.27 – 19.06%)
- Card-counting proof
- Settable minimum/maximum limits
